PROFILE SUMMARY

Software Engineer with **1 year of experience** developing, testing, and troubleshooting **full-stack applications using Java, React.js, REST APIs, and SQL**. Hands-on experience with **Spring Boot, Hibernate/JPA, microservices, Node.js, and Express.js**, with a strong foundation in **Object-Oriented Design and Data Structures & Algorithms**. Experienced in translating requirements into technical solutions, developing responsive interfaces, integrating RESTful APIs, resolving production issues, and collaborating with cross-functional teams in **Agile/Scrum environments**.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, React.js, JavaScript
- **Backend:** Java, Spring Boot, REST APIs, Microservices
- **Databases:** MySQL, MongoDB, NoSQL
- **Software Engineering:** Object-Oriented Design, API Development & Integration, Unit Testing, Debugging, Performance Optimization, Code Reviews, Root-Cause Analysis
- **Tools & DevOps:** Git, Docker, CI/CD Pipelines, AWS
- **Practices:** Agile/Scrum, Requirement Analysis, SDLC, Cross-Functional Collaboration
- **Soft Skills:** Analytical Problem-Solving, Effective Communication, Cross-Functional Collaboration, Ownership, Adaptability, Time Management

PROFESSIONAL EXPERIENCE

Full Stack Developer — VMV Tech Solutions Pvt Ltd

June 2025 – June 2026

- Designed, developed, tested, and deployed 20+ full-stack product features using **Java, React.js, REST APIs, and SQL**, translating business requirements into functional technical solutions.
- Reviewed **80+ pull requests from peers, giving feedback on style, correctness, and efficiency**; incorporated senior engineer input to raise overall code quality.
- Triaged and resolved 10+ production issues per week across **application, API, and database layers** through systematic root-cause analysis.
- Authored and maintained technical documentation for services/features, keeping it current as requirements evolved.
- **Collaborated with business analysts and QA in Agile/Scrum sprints**, using **Git** for version control and contributing to testing, issue resolution, and release activities across a 4-person team.

KEY PROJECTS

Projects Delivered at VMV Tech Solutions

RentOware — STANVEE Wear-It

React Native, React.js, SQL Server, REST APIs

- Built a customer **mobile app (React Native)** for browsing plan-eligible outfits, scheduling deliveries, and tracking rental orders and returns.
- Developed an **admin/logistics dashboard (React web)** for managing products, subscription plans, orders, inventory, and delivery agents.
- Connected both applications to a single backend **REST API and SQL Server** database, creating one centralized rental management system across mobile and web clients.

Aarambh — Full-Stack Fashion E-Commerce Platform

React Native, React, Node.js, Express.js, SQL Server

- Built customer-facing apps for **mobile (React Native) and web (React)** with browsing, filtering, wishlist, cart, and order tracking, plus an admin panel for managing products, variants, and orders with role-based access.
- Implemented a color variant system where each color has its own image, stock, and available sizes, keeping variant data accurate through cart and order processing.

- Developed the backend with **Node.js/Express.js** in an **MVC architecture** routes, controllers, and models communicating with SQL Server, returning JSON to the frontend.

Personal / Academic Projects

Patient Management System

Java, Spring Boot, JPA/Hibernate, Kafka, Docker, Kubernetes, AWS

- Built a microservices healthcare platform using **Java, Spring Boot, and JPA/Hibernate**, applying **object-oriented design to service architecture**.
- Used **Kafka** to asynchronously sync patient record updates across services, avoiding tight coupling and direct synchronous calls between services.
- Containerized each service with Docker and deployed on Kubernetes, keeping services independently deployable and scalable.

Festora – Cultural Event Management Platform

React.js, FastAPI, MongoDB, JWT

- Built a full-stack platform for event creation, registration, and management, using **FastAPI** for the backend and MongoDB's flexible schema to handle varying registration fields across different event types.
- Implemented JWT-secured REST APIs for authentication and authorization, and a React.js front-end for organizers and attendees to manage events end-to-end.

EDUCATION

- **Master of Computer Applications (MCA)** — Pimpri Chinchwad University | Aug 2024 – June 2026 | CGPA 8.4
- **Bachelor of Computer Applications (BCA)** — The New College, Kolhapur | July 2021 – May 2024 | CGPA 8.3

CERTIFICATIONS & ACHIEVEMENTS

- Participant, Samsung Innovation Campus Programme
- IIIC Volunteer — Pimpri Chinchwad University
- Introduction to Software Engineering — IBM
- Generative AI Fundamentals — IBM
