PROFILE SUMMARY

Software Engineer with **1 year of experience** building front-end applications with **React.js, JavaScript, HTML, and CSS**, and designing **Java microservices with REST APIs**. Delivered end-to-end application development projects with **relational and document databases** (PostgreSQL, MongoDB), applying **OOP and SOLID principles** to application architecture. Writes **unit tests** for reliability and **edge-case coverage**, and **collaborates with senior developers and architects in fast-paced Agile/Scrum teams**. Academic exposure to Azure, with hands-on production experience on **AWS**.

TECHNICAL SKILLS

- **Front-End:** React.js, Redux Toolkit, HTML5, CSS3, JavaScript (ES6+)
- **Languages:** Java, Python, JavaScript, SQL
- **Backend & APIs:** FastAPI, Spring Boot, REST API design, Microservices, Authentication
- **Databases:** PostgreSQL, MongoDB, MySQL, Relational Databases, Document Databases
- **Cloud & DevOps:** AWS, Docker, CI/CD Pipelines, Git, GitHub, Maven
- **Engineering:** OOP, Software Design, SDLC, Debugging, Problem Solving, Agile/Scrum
- **Testing:** JUnit, Unit Testing, Integration Testing, API Testing, Jest
- **Soft Skills:** Analytical Problem Solving, Logical Reasoning, Communication, Teamwork

PROFESSIONAL EXPERIENCE

Full Stack Developer — VMV Tech Solutions Pvt Ltd

June 2025 – June 2026

- Developed and maintained full-stack applications using **React.js, JavaScript, Java, Spring Boot, REST APIs, SQL, and MongoDB** across application development, testing, and maintenance workflows.
- Built reusable **React.js** components and **backend services, integrated APIs, implemented validation and database operations, and delivered features** based on business requirements.
- Developed and maintained **microservice-based solutions** with a focus on maintainable application design and reliable frontend-backend integration.
- **Wrote unit tests covering edge cases and reliability scenarios**, and debugged application, API, and database defects through systematic root-cause analysis.
- Enforced coding standards through code reviews across 20+ pull requests, incorporating peer feedback and reducing review-flagged issues by roughly 23% over the project lifecycle.
- Collaborated with business analysts and QA in Agile/Scrum sprints, translating requirements into working code and delivering 10 functional features across client projects on schedule.

KEY PROJECTS

Patient Management System

Java, Spring Boot, Kafka, Docker, Kubernetes, AWS

- Developed a microservices-based healthcare platform supporting patient records, appointments, and billing, utilizing **JPA/Hibernate** for persistence and establishing service boundaries by domain responsibility, resulting in improved system efficiency and scalability by 82%.
- Used **Kafka** to asynchronously sync patient record updates across services, avoiding tight coupling and direct synchronous calls between the core patient service and downstream consumers.
- Containerized each service with **Docker** and deployed on Kubernetes, keeping services independently deployable and scalable.

Festora – Cultural Event Management Platform

React.js, FastAPI, MongoDB, JWT

- Designed and built the backend using **FastAPI**, applying **REST API** and microservice principles, with MongoDB's flexible schema to handle varying registration fields across different event types.
- Implemented **JWT-secured REST APIs** for authentication and authorization, and a React.js front-end for organizers and attendees to manage events end-to-end.

EDUCATION

- **Master of Computer Applications (MCA)** — Pimpri Chinchwad University, Pune | Aug 2024– June 2026 | CGPA 8.4
- **Bachelor of Computer Applications (BCA)** — The New College, Kolhapur | Aug 2021– June 2024 | CGPA 8.3

CERTIFICATIONS

- Introduction to Software Engineering — IBM
- Generative AI Fundamentals — IBM
